Rigid construction and an aggressive posture take aerodynamics to a whole new level.

Efficiency. Redefined.
Rather than a typical straight blade, the Talon features a curved blade, matching the incoming airflow, effectively increasing efficiency by reducing parasitic drag.

Aggressive By Nature
Designed with a forward angled blade tip, the VTL Talon slices through the air with minimal vortex interaction and aerodynamic noise.

Fly Faster
Experience double digit improvements in speed and efficiency when paired with the brand new H62A in-flight adjustable propeller hub.

Engineering Excellence
In order to achieve the unique geometry of the Talon propeller, we had to build it tough. We developed proprietary construction techniques to increase rigidity and reduce vibration.
